

Pulsar Analytics - Getting Started Guide

Version 3.1 - Updated May 2026

1. Create your account

Go to app.pulsaranalytics.io/signup and enter your work email, full name, and a strong password. Pulsar sends a verification email; click the link within 24 hours to activate the workspace.

2. First dashboard

After verification, the onboarding wizard asks you to connect your first data source (Postgres, Snowflake, BigQuery, or CSV) and pick a starter template. The default template renders a revenue-by-week chart and a churn cohort table.

3. Invite teammates

Open Workspace > Members and click Invite. Enter email addresses and assign a role: Viewer, Editor, or Admin. Invited users receive an email with a one-time join link valid for 7 days. The free Starter plan allows up to 3 members.

4. Single sign-on

Business and Enterprise plans can enable SSO via Workspace > Security > SSO. Pulsar supports SAML 2.0 and OIDC. After enabling SSO, new members must sign in through your IdP; the email/password path is disabled for the workspace.

5. Get help

From the app, click the question-mark icon to chat with Astra, Pulsar's in-app support agent, or email support@pulsaranalytics.io. Enterprise customers have a dedicated account manager reachable through the in-app support widget.
