

Pulsar Analytics - Workspace Admin Guide

Effective from May 2026

1. Workspace settings

Workspace > Settings is where admins change the workspace name, logo, default timezone, and billing contact. Changes propagate to all members within a minute.

2. Roles and permissions

Pulsar has three roles: Viewer (read-only dashboards), Editor (create and edit dashboards, cannot manage members) and Admin (full workspace control, including billing). Custom roles with granular permissions are available on the Enterprise plan only.

3. Audit log

Workspace > Audit log records every admin and editor action: member invites, role changes, dashboard publications, data source additions, and query exports. Entries are retained for 90 days on Starter/Team and 365 days on Business/Enterprise.

4. Data sources

Workspace > Data sources lets admins connect, test, and remove data warehouse connections. Pulsar stores credentials encrypted at rest with envelope encryption; admins can rotate the workspace master key from the same page.

5. Account recovery

Admins can transfer workspace ownership to another member from Workspace > Settings > Ownership. The new owner must accept the transfer within 7 days, after which the original owner loses admin privileges.
